

PORT OF BOSTON

EST 1884

Notice to Mariners 045.2018

Dated 09.08.2018

Submerged Electricity Cables

Mariners are advised that the Port has been notified by Orsted that sections of the windfarm electricity cables passing through the Port of Boston Area of Jurisdiction are laying exposed on the seabed or are shallow buried.

Caution should be taken when engaging in any activity which may lead to contact with the seabed in the vicinity of the cables marked on BA Charts 108 and 1200.

It is expected that accurate positions will be made available to the port and when this happens, an updated Notice will be issued and the Port will consider mitigation measures.
